

Arrow Seal

Strong indicative ring seal

Prevention Protection Peace of Mind

Key Features

- 1 The Inspection Window is a feature that makes visual checking of the locking mechanism easy and quick – a unique feature developed by Mega Fortris. The locking mechanism on other seals cannot be inspected visually, making those seals less tamper evident.
- 2 Mega Fortris uses ultrasonic welding technology to fasten Inspection Window and caps to the seal. Ultra Sonic welding is permanent and it is too strong to be cut or forced open without clear evidence.
- 3 The Arrow seal comes with anti-slip grips to make sealing easy and quick.
- 4 All Mega Fortris seals are etched with permanent laser marking. Laser marking offers the highest level of security as it cannot be removed and replaced.
- 5 Security breaking lines at the snapping point provide easy removal of the seal and prevents a broken seal from being glued or welded together without evidence.
- 6 Double locking mechanism.

Description

The Arrow Seal is one of the most tamper evident ring seals in the world combining unique features like the Inspection Window, ultra sonic welding and a double locking mechanism.

The Arrow Seal is constructed with a unique integrated Inspection Window that allows tamper detection at a glance. This feature is extremely valuable to operations with high traffic volume and high security requirements.

Specifications

Material: Polypropylene (food grade)
Length: 22cm (8.5")
Pull strength: 35+ kg (77+ lbs)

Standard markings: serial number, customer name/logo. A variation of bar codes can also be marked with laser technology.

Typical applications: trucks and tankers, customs control, airline cargo, roll cages, rail carts, warehouses, distilleries etc.
